

Corporate Fact Sheet

May 2012

Company Overview

Jibe Mobile is creating a connected universe of apps. The Jibe Mobile App-to-App platform gives operators, device suppliers and application developers the essential end-to-end capabilities to deliver communication-rich, real-time services and applications. Consumers expect mobile applications to match the real-time performance they experience on PCs and Jibe brings this experience to a broad universe of connected mobile apps.

Jibe gives developers the tools to connect two or more mobile applications unlocking new in-app monetization opportunities. Once connected, developers "get people talking" with in-app features such as group chat, VoIP, video, and file transfer to further differentiate their apps and increase user engagement. Developers are using the Jibe SDK across the globe creating multi-player games, consumer apps, customer service apps, enterprise apps, and building in advertising models.

Jibe Mobile is headquartered in Mountain View with offices in London, Düsseldorf and Tokyo.

Corporate Facts

- Founded in 2006
- Privately-held

Products

- **App-to-App Platform** – Ideal for carriers, the App-to-App platform enables the creation and delivery of rich mobile applications, providing subscribers with next generation messaging services and a new class of apps that bring together content and comms.
