

Jibe AppKits™ FACT SHEET

Jibe Mobile provides a comprehensive, easy-to-use software development kit (SDK) and a suite of AppKits which can be implemented across multiple device platforms. The unique SDK allows for access to critical resources on the carrier network and seamless communications features without requiring extensive knowledge of complex mobile protocols and standards.

AppKits Features

- **Simple API:** High-level API available across major device platforms.
- **Seamless Interaction:** Synchronize IMS protocols and integrate network features through an easy step-by-step process.
- **Personalized:** Pre-built apps on the Jibe platform are fully customizable and skinnable for unique finish catering to brand.
- **Social Media Aggregation:** Create apps that house all web-based social media sites, IM networks and online photo storage services. Allows for status updates across multiple platforms simultaneously.
- **Open Address Book:** An open, pluggable mobile address book framework that imports contacts from sources across e-mail, social media and instant messaging.
- **RCS Peer to Peer:** Tie in real-time messaging into an address book application allowing for sending of messages, images and video instantaneously.
- **Media Gallery:** Pluggable framework which allows for quick access to sharing of any media across all social media platforms.
- **Peer to Peer Gaming:** P2P messaging feature plug-in for mobile games to increase engagement and taking mobile gaming to a new level.
- **Customer Care:** Allows for build-out of smart customer service applications to be embedded within an existing app or as a stand-alone app to allow for bill payments, account balance and live support.
