

Jibe App to App Platform FACT SHEET

Jibe's App to App Communications Platform is the first to bring the open, social, peer-to-peer nature of the web to mobile networks. It efficiently enables the creation and delivery of rich mobile applications for mobile operators. The platform, built specifically for operators, their partners and third party developers, allows for a quick and easy method to launch mobile applications across both high-end and legacy devices across next generation IMS/RCS network infrastructures. As a result, mobile subscribers will have access to revolutionary messaging services.

App to App Platform Features

- **New Services and Value:** Jibe offers an opportunity to deliver a new market for communication and entertainment tools on mobile devices.
- **Rich Messaging Capability:** Create applications easily with launch P2P, content sharing, customer care and payment services immediately.
- **Enhanced applications:** Develop applications such as intuitive address books, rich social and instant messaging, video calling, file sharing and gaming all across a peer-to-peer platform.
- **User Efficiency:** Combine all mobile communication platforms to one space and enable a more seamless communication method across voice, video, SMS and MMS.
- **Remove Excess Data:** Jibe's Intelligent Connectivity Management and data compressing programming allows for reduction of data transfer by 10:1.
- **OEM Support:** Direct development and full control to launch end-to-end solutions with 24/7 customer support.
- **Battery Management:** Platform allows for minimal battery use due to minimal amounts of data transfer.
